

This is to ask you to please reject NAB's petition 04-160.
I am against anything that would curtail the ability of XM radio to provide XM
Instant Traffic and Weather.

I recently purchased an XM system and took a long road trip into the North East.
The ability quickly ascertain traffic and weather conditions for the particular
areas I was approaching greatly enhanced safety and pleasure of the driving
experience, including avoiding traffic jams, and saving fuel. To try to find a
local radio station that provided the same information as quickly was impossible
(I know this from past experience).

Please do not pass this petition or any others that limit freedom of speech and
this innovative and helpful technology.
